EDUCATION

California Polytechnic State University, San Luis Obispo

2025

Computer Science

EXPERIENCE

Apple – Software Engineer

June 2025 – Present

IS&T, ETS Emerging Tech

API Hub | Enterprise API Platform

- Designed and built a multi-tenant service mesh with a custom control plane and dynamic Envoy sidecars. Integrated API Hub access policies with routing and ingress/egress filtering; built OpenTelemetry/Jaeger observability and a UI for live topology, traces, logs, and metrics.
- Architected configurable CI/CD deployment pipelines targeting EKS and other cloud instances, with selectable deployment strategies and per-component versions.
- Owned build-once/promote-many delivery with ephemeral regression environments and promotion/rollback across dev, test, and production. Automated tag-to-deployment in approximately 25–30 minutes, including full regression testing, with no manual commands.
- Built backend APIs and hardened gateway authentication for a company-wide platform unifying API discovery, provider and consumer onboarding, and access management.

Stratos3S | Diagnostic Sanitization

- Maintain a system that automatically removes personal information from diagnostic reports. Collaborate with the Radar team on production fixes and migration to a managed cluster.

Observability

- Develop OpenTelemetry instrumentation and collector-to-ClickHouse telemetry pipelines, with UI queries and views for traces, logs, metrics, and service topology.

Lockheed Martin Space – Software Engineering Intern

June 2024 – June 2025

- Built an expert search and review-assignment application to replace spreadsheet coordination, owning architecture, UI, backend APIs, server provisioning, security reviews, and deployment.
- Integrated data sources with Next.js, TypeScript, Prisma, and Supabase; deployed on Linux behind Nginx.

Lockheed Martin Space – AI/ML Research Intern

June 2023 – Oct 2023

- Researched low-light object detection with TensorFlow, Keras, and OpenCV; developed a custom data loader and evaluated data augmentation and hyperparameter tuning.

HaptX – IT Engineering Intern

Mar 2023 – June 2023

- Implemented geographic access restrictions and authentication policies; built login-activity and policy-enforcement analytics with Microsoft Azure and Intune.

Cal Poly ITS – Junior Security Operations Center Analyst

June 2022 – Feb 2023

- Built a Python Slack bot integrated with Splunk SOAR to automate phishing, suspicious-login, and account workflows, reducing analyst processing time from several minutes to under one minute.

SELECTED PROJECT

Homelab – Operate self-hosted applications and agents using containers and Cloudflare Zero Trust.

TECHNICAL SKILLS

Languages: Python, TypeScript, SQL, Java, C, C++

Systems & Web: Kubernetes, EKS, Docker, Envoy, Spinnaker, OpenTelemetry, Jaeger, Linux, React, Next.js, Node.js

AI/ML: TensorFlow, Keras, OpenCV, Jupyter
