EXPERIENCE

- Software Engineer** June 2025 – Present

Apple – IS&T, ETS Emerging Tech *Full-time*

 - **Service Mesh & Distributed Systems:** Designed and built a multi-tenant service mesh with a custom control plane and dynamic Envoy sidecars, integrating API Hub access policies with traffic routing and ingress/egress filtering. Built OpenTelemetry/Jaeger observability and a UI for live service topology, traces, logs, and metrics.
 - **CI/CD & Developer Infrastructure:** Architected the deployment layer of CI/CD pipelines with build-once/promote-many releases, ephemeral regression environments, and promotion and rollback across development, test, and production. Automated the path from release tag through full regression testing and deployment in approximately 25–30 minutes, with no manual commands.
 - **API Platform & Gateway Security:** Develop backend APIs and harden gateway authentication for a company-wide platform unifying API discovery, provider and consumer onboarding, and access management.
 - **Production Engineering:** Maintain a diagnostic sanitization system that automatically removes personal information from user-submitted reports, collaborating with the Radar team on production fixes and managed-cluster migration. Perform Kubernetes/EKS node upgrades across platform infrastructure.
- Software Engineering Intern** June 2024 – June 2025

Lockheed Martin Space *Sunnyvale, CA*

 - **Full-Stack Ownership:** Built a subject matter expert search and review-assignment application, replacing spreadsheet coordination. Owned proposal, architecture, UI, backend APIs, server provisioning, security reviews, and deployment.
 - **Implementation:** Integrated source data through APIs and scheduled jobs using Next.js, TypeScript, Prisma, and Supabase; deployed a Linux service behind Nginx and iterated on customer feedback.
- AI/ML Research Intern** June 2023 – Oct 2023

Lockheed Martin Space *Sunnyvale, CA*

 - **Computer Vision:** Researched low-light object detection using Python, TensorFlow, Keras, and OpenCV. Developed a custom data loader and evaluated data augmentation and hyperparameter tuning in an internal research setting.
- IT Engineering Intern** Mar 2023 – June 2023

HaptX Inc. *San Luis Obispo, CA*

 - **Identity and Access:** Implemented country-based access restrictions and authentication policies; built login-activity and policy-enforcement analytics using Microsoft Azure and Intune.
- Junior Security Operations Center Analyst** June 2022 – Feb 2023

Cal Poly Information Technology Services *San Luis Obispo, CA*

 - **Security Automation:** Built a Python Slack bot integrated with Splunk SOAR for phishing, suspicious-login, and account workflows, reducing analyst processing time from several minutes to under one minute.
 - **Incident Response:** Handled 50–200 security incidents daily for a university community of over 20,000 students and employees.

EDUCATION

California Polytechnic State University, San Luis Obispo 2025
Computer Science

PROJECTS

- **Homelab:** Operate a home environment for self-hosted applications, infrastructure experiments, and hosted agents, using containers and Cloudflare Zero Trust.

SKILLS

Languages: Python, TypeScript, SQL, Java, C, C++

AI/ML: TensorFlow, Keras, OpenCV, Jupyter

Platforms: React, Next.js, Node.js, Kubernetes, EKS, Docker, Envoy, Spinnaker, OpenTelemetry, Jaeger, Linux, Git, Azure, Splunk
