## EXPERIENCE

---

- Software Engineer** June 2025 – Present  
*Apple – IS&T, ETS Emerging Tech* *Full-time*
  - CI/CD & Developer Infrastructure:** Architect and own the deployment layer of CI/CD pipelines for an internal API platform, enabling build-once/promote-many releases, ephemeral test environments, and automated promotion and rollback. Automate release-to-deployment workflows with full regression testing in approximately 25–30 minutes.
  - Service Mesh Architecture:** Research and prototype multi-tenant service mesh designs, evaluating Envoy, Istio, Consul, and Kuma. Develop observability with OpenTelemetry, Jaeger, and topology, trace, log, and metric interfaces.
  - API Platform:** Contribute backend endpoints, gateway authentication hardening, and server-side rendering improvements for a company-wide API platform. Help migrate customers from legacy API Exchange and Stratos web services.
  - Production Infrastructure:** Maintain diagnostic sanitization software with the Radar team; deliver production fixes and support managed-cluster migrations and Kubernetes/EKS node upgrades.
- Software Engineering Intern** June 2024 – June 2025  
*Lockheed Martin Space* *Sunnyvale, CA*
  - Full-Stack Ownership:** Built a subject matter expert search and review-assignment application, replacing spreadsheet coordination. Owned proposal, architecture, UI, backend APIs, server provisioning, security reviews, and deployment.
  - Implementation:** Integrated source data through APIs and scheduled jobs using Next.js, TypeScript, Prisma, and Supabase; deployed a Linux service behind Nginx and iterated on customer feedback.
- AI/ML Research Intern** June 2023 – Oct 2023  
*Lockheed Martin Space* *Sunnyvale, CA*
  - Computer Vision:** Researched low-light object detection using Python, TensorFlow, Keras, and OpenCV. Developed a custom data loader and evaluated data augmentation and hyperparameter tuning in an internal research setting.
- IT Engineering Intern** Mar 2023 – June 2023  
*HaptX Inc.* *San Luis Obispo, CA*
  - Identity and Access:** Implemented country-based access restrictions and authentication policies; built login-activity and policy-enforcement analytics using Microsoft Azure and Intune.
- Junior Security Operations Center Analyst** June 2022 – Feb 2023  
*Cal Poly Information Technology Services* *San Luis Obispo, CA*
  - Security Automation:** Built a Python Slack bot integrated with Splunk SOAR for phishing, suspicious-login, and account workflows, reducing analyst processing time from several minutes to under one minute.
  - Incident Response:** Handled 50–200 security incidents daily for a university community of over 20,000 students and employees.

## PROJECTS

---

- Homelab:** Operate a home environment for self-hosted applications, infrastructure experiments, and hosted agents, using containers and Cloudflare Zero Trust.

## SKILLS

---

**Languages:** Python, TypeScript, SQL, Java, C, C++

**AI/ML:** TensorFlow, Keras, OpenCV, Jupyter

**Platforms:** React, Next.js, Node.js, Kubernetes, EKS, Docker, Envoy, Spinnaker, OpenTelemetry, Jaeger, Linux, Git, Azure, Splunk
